

USB/RS232/RS485 to **TPUNB Wireless Serial Data Transceiver**

This product is a long-distance wireless data transmission transceiver that utilizes domestically produced TPUNB spread-spectrum modulation. It offers high-

performance, high-reliability, high-stability, and low-power wireless data transmission. It provides a high-performance, low-cost solution for complex environments where on-site wiring is impractical. Its most notable features are its long distance and low power consumption, transcending the previous requirements of

channels: 500.

Humidity: 5% to 95% RH.

on-site wiring, enabling on-site solutions without wiring. Its application scenarios in the Internet of Things are becoming increasingly widespread. This product enables one-to-one, one-to-many, or many-to-many data transmission, eliminating the need to distinguish between transmitters and receivers. 1. Wireless meter reading, such as smart electricity, water, gas, and heat meters. 2. Ultra-low-power sensors for slowly changing physical quantities (temperature, water pressure, PM2.5, geomagnetic sensors). 3. Wireless alarms (smoke detectors, pyro-infrared). 4. Remote I/O controllers (lighting control, air conditioning control). 5. Industrial applications: connecting industrial machine tools, industrial automation equipment, remote irrigation equipment, access control systems, security control

- systems, and highway scale data transmission.
- II. Functional parameters 1. Operating frequency: 410.11-510.11 MHz (default: 410 MHz), number of wireless
- 2. Wireless range (open air): 5 km (rubber stick antenna), 10 km (suction cup

5. Data rate: 1.2/2.4/4.8/9.6/19.2/76.8 kbps.

4. Modulation: S-FSK; maximum number of transmitted bytes: 1280.

3. Maximum transmit power: $30 \pm 2 \, dB$ (default: $30 \, dB$), receive sensitivity: -120 dBm.

6. Serial port baud rate: 2400/4800/9600/19200/38400/57600/115200 bps. 7. Data bits: 7, 8; Stop bits: 1, 1.5, 2; Parity: None, Even, Odd. 8. Voltage: DC 5V; Current: \leq 200mA; Operating temperature: -20°C to 85°C;

9. Supports one-to-one, one-to-many, or many-to-many data transmission,

eliminating the need to distinguish between transmitter and receiver.
